MUST DO THINGS IN CLOUD

Nensi Ravaliya

1 Learn the Core Concepts

Compute, Storage, Network

Before you touch any service, understand how the cloud actually works.

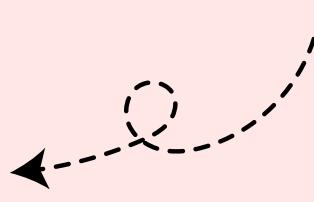

LEARN

- **Compute:** It's your virtual machine or server that runs apps.
- **Storage:** It's where your files, images, and backups live.
- **Network:** It connects everything and controls who can access what.

2 Create a Free Account

Deploy Your First Small App

Doing it yourself will teach you 10x more than reading about it.

- **Create a free account** (AWS / Azure / GCP).
- **Deploy** a small website or a sample API.
- **Learn** how to create and delete resources safely.

Learn How Pricing Works

It Will Save You Later

Cloud looks free at first... until you forget to stop a running resource 😅

- Understand **free-tier limits** (what's actually free).
- Set **budget alerts** to avoid billing shocks.
- **Practice** deleting unused instances and storage.

Bonus Point

Small Advice

Don't chase all 50 services at once.
Master one service deeply and understand
why it exists.

BONUS

Once you know the “**why**,” learning new
services becomes effortless.
